4   Antenna information

There is co-layout design (C35&C32) for antenna connection. Please order your module carefully. Users can also modify the capacitor position but MXCHIP would not take any responsibility for this behavior.

EMW3280-E load the capacitor C35 (10pF/0201), it means can use U.F.L RF connector for external antenna. If want to use on-board PCB printed antenna, just need load the capacitor from C35 to C32 (EMW3280-P).

In order to get the maximum performance, strongly suggest customer use external antenna connected with U.F.L RF connector.
4.1   Minimizing radio interference

When integrating the Wi-Fi module with on board PCB printed antenna, make sure the area around the antenna end the module protrudes at least 15mm from the mother board PCB and any metal enclosure. If this is not possible use the on board U.FL connector to route to an external antenna.

The area (6.5mmx17.3mm) under the antenna end of the module should be keep clear of metallic components, connectors, vias, traces and other materials that can interfere with the radio signal.
4.2 U.F.L RF Connector

This module use U.F.L type RF connector for external antenna connection.
